Integrin alpha-D precursor.
                                                                                                                                                                                                                                                                                                                                                                               -:- SUBUNIT: Heterodimer of an alpha and a beta subunit. Alpha-D associates with beta-2 (By similarity).
-:- SUBCELULIAR LOCATION: Type I membrane protein (By similarity)
-:- DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrin I-domains do not undergo protease cleavage.
-:- SIMILARITY: Belongs to the integrin alpha chain family.
-:- SIMILARITY: Contains 7 FG-GAP repeats.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                chondroitin-sulfate type (By similarity).

SYMILARITY: Belongs to the fibril-associated collagens with interrupted helices (FACIT) family.

SYMILARITY: Contains 18 fibronectin type III domains.

SIMILARITY: Contains 1 TSP N-terminal (TSPN) domain.

SIMILARITY: Contains 4 VWFA domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FUNCTION: Type XII collagen interacts with type I collagen-containing fibrils, the COLI domain could be associated with the surface of the fibrils, and the COLZ and NC3 domains may be localized in the perifibrillar matrix (By similarity).

SUBUNIT: Trimer of identical chains each containing 190 kDa of nontriple-helical sequences (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              eimilarity).

"Experimental support for a beta-propeller domain in integrin alphasubunits and a calcium binding site on its lower surface.";
Proc. Natl. Acad. Sci. U.S.A. 95:4870-4875(1998).
-I- FUNCTION: Integrin alpha-M/beta-2 is implicated in various adhesive interactions of monocytes, macrophages and granulocytes as well as in mediating the uptake of complement-coated particles it is identical with CR-3, the receptor for the iC3b fragment of the third complement component. It probably recognizes the R-G-beptide in C3b. Integrin alpha-M/beta-2 is also a receptor for fibrinogen, factor X and ICAM1. It recognizes P1 and P2 peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Baldwin E.T., Sarver R.W., Bryant G.L. DOMAIN: This sequence defines five distinct helical domains (COL1 and COL2) and three no domains (NC1, NC2, and NC3).

PTM: The triple-helical tail is stabilized between the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of triple of the triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of tr

                                                                                                                                                                                                                                                                                                                                                                                                                  Event=Alternative splicing; Named isoforms=2;
Comment=The final tissue form of collagen XII may contain
homotrimers of either isoform Long or isoform Short or any
combination of isoform Long and isoform Short. Only isoform Long
is a proteoglycan. Isoform Long has more restricted expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Natl.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             immnosuppressant and cytostatic activity. The polymucleotides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat disease of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, and thrombolyric activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, cancer diagnosis and therapy, drug screening, assays for receptor activity. The sequence data for this patent did not form part of the printed specification
New TANGO 197 and/or TANGO 216 fusion polypeptides for preventing cameliorating symptoms of anthrax comprises a von Willebrand factor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel fusion polypeptide comprising a von Willebrand factor A-like domain (vWF) amino acid sequence and an amino acid sequence heterologous to the vWF. The polypeptide of the invention demonstrates antibacterial activities whilst the composition and method may be useful in preventing or ameliorating the symptoms of cutaneous and/or inhalation anthrax. The current sequence is that of the human TANGO 197 HiaTag fusion protein of the invention.
                         New TANGO 197 and/or TANGO 216 fusion polypeptides for preventing ameliarating symptoms of anthrax comprises a von Willebrand factor domain (VWF) amino acid sequence and an amino acid sequence heteroto the VWF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           domain

Also described are: a method of preventing or ameliorating a symptom of anthrax in a subject thought to be at risk for exposure to or suspected of having been exposed to Bacillus anthracis; and a pharmaceutical composition comprising the movel fusion polypeptide. The composition and method are useful in preventing or ameliorating symptoms of cutaneous and/or inhalation anthrax. This is the amino acid sequence of a fusion protein comprising mature human TANGO197, thrombin allowers after and his protein comprising mature human TANGO197.
              Novel nucleic acid sequences encoding TANGO-128, 140, 19 and 239 polypeptides useful for the treatment of asthma, arthritis, psoriasis and autoimmune diseases.

The nucleic acids are also useful for producing transgenic animals and the TANGO polypeptides themselves. Partial TANGO-128, 140, 197, 212, 213, 224, 239 sequences are useful in forensic biology, for diagnostic assays, pharmacogenomics and for monitoring clinical trials. TANGO polypeptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a disorder associated with aberrant TANGO expression. A wide range of cellular

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cc as a human anthrax toxin receptor (ATR) polypeptide identified dentity to a newly isolated human ATR (see ABP54903). The 2 polypeptides CC are identical between amino acids 1-317, but differ thereafter at the C-cc terminus. The present polypeptide, encoded by IMAGE CLONE 4563020, has no CC previously known function, and there has been no prior indication that it is a complete or partial ATR. The invention provides ATR polypeptides and CC polymucleotides, vectors, host cells, and transgenic and knock-out CC animals. It also provides methods for identifying molecules that bind the ATR and which reduce the toxicity of anthrax toxin. A claimed method for treating anthrax in a human or animal involves administering an agent that inhibits binding between anthrax toxin protective antigen (PA) and CC ATR at a level effective to reduce the severity of anthrax. Suitable CC agents include the present polypeptide or a PA-binding fragment of it, a CC PA-binding polypeptide at least 80% identical to these, a fusion protein, a monoclonal or polyclonal antibody, a polysaccharide, a lipid or a couleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel fusion polypeptide comprising a von Willebrand factor A-like domain (vWP) amino acid sequence and an amino acid sequence heterologous to the VWP. The polypeptide of the invention demonstrates antibacterial activities whilst the composition and method may be useful in preventing or ameliorating the symptoms of cutaneous and/or inhalation antibrax. The current sequence is that of the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New TANGO 197 and/or TANGO 216 fusion polypeptides for preventing or ameliorating symptoms of anthrax comprises a von Willebrand factor A-like domain (vWF) amino acid sequence and an amino acid sequence heterologous to the vWF.
New TANGO 197 and/or TANGO 216 fusion polypeptides for preventing ameliorating symptoms of anthrax comprises a von Willebrand factor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention describes a fusion polypeptide comprising a von Willebrand factor A-like domain (vWF) amino acid sequence and an amino acid sequence heterologous to the vWF. Also described are: a method of preventing or ameliorating a symptom of anthrax in a subject thought to be at risk for exposure to or suspected of having been exposed to Bacillus anthracis; and a pharmaceutical composition comprising the novel fusion polypeptide. The composition and method are useful in preventing or ameliorating symptoms of cutaneous and/or inhalation anthrax. This is the amino acid sequence of a human von Willebrand factor A-like domain (vWF) amino acid sequence TANGO197.
                                                                                                                                              (ROTT/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel fusion polypeptide comprising a von Willebrand factor A-like domain (vWP) amino acid sequence and an amino acid sequence heterologous to the vWF. The polypeptide of the invention demonstrates antibacterial activities whilst the composition and method may be useful in preventing or ameliorating the symptoms of cutaneous and/or inhalation anthrax. The current sequence is that of the human TANGO 197 FLAG fusion protein of the invention.
                                                                                                         New TANGO 197 and/or TANGO 216 fusion polypeptides for preventing or ameliorating symptoms of anthrax comprises a von Willebrand factor A-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antibacterial; gene therapy; von Willebrand factor A-like domain amino acid sequence; vWF amino acid sequence; anthrax; Bacillus anthracis; cutaneous anthrax; inhalation anthrax; human; TANGO197; FLAG; fusion protein; gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            to the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes a fusion polypeptide comprising a von Willebrand factor A-like domain (vWF) amino acid sequence and an amino acid sequence heterologous to the vWF. Also described are: a method of preventing or ameliorating a symptom of anthrax in a subject thought to be at risk for exposure to or suspected of having been exposed to Bacillus anthracis; and a pharmaceutical composition comprising the novel fusion polypeptide. The composition and method are useful in preventing or ameliorating symptoms of cutaneous and/or inhalation anthrax. This is the amino acid sequence of a fusion protein comprising human TANGO197 and FLAG that can be used to treat exposure to or prevent a symptom of anthrax.
New TANGO 197 and/or TANGO 216 fusion polypeptides for preventing or ameliorating symptoms of anthrax comprises a von Willebrand factor A-like
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Homo sapiens.

The polypeptide of the invention demonstrates antibacterial activities whilst the composition and method may be useful in preventing or amellorating the symptoms of cutaneous and/or inhalation anthrax. The current sequence is that of the human TANGO 197 HiaTag fusion protein of the invention.
                       New TANGO 197 and/or TANGO 216 fusion polypeptides for preventing or ameliareting symptoms of anthrax comprises a von Willebrand factor Adomain (WF) amino acid sequence and an amino acid sequence heterolog to the vWF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              domain

Also described are: a method of preventing or ameliorating a symptom of anthrax in a subject thought to be at risk for exposure to or suspected of having been exposed to Bacillus anthracis; and a pharmaceutical composition comprising the novel fusion polypeptide. The composition and method are useful in preventing or ameliorating symptoms of cutaneous and/or inhalation anthrax. This is the amino acid sequence of a fusion protein comprising human TANGO197, thrombin cleavage site and his tag that can be used to treat exposure to or prevent a symptom of anthrax.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is the protein sequence of a human surface-bound anthrax toxin receptor (ATR), as predicted from an isolated cDNA clone. Anthrax toxin protective antigen (PA) binds to the ATR at a von willebrand factor A domain located in the extracellular domain of ATR. The invention provides ATR polypeptides and polypucleotides, vectors, host cells, and transgenic and knock-out animals. It also provides methods for identifying molecules that bind the ATR and which reduce the toxicity of anthrax toxin. A claimed method for treating anthrax in a human or animal involves administering an agent that inhibits binding between PA and ATR at a level effective to reduce the severity of anthrax. Suitable agents include ATR or a PA-binding fragment of ATR, a PA-binding polypeptide at least 80% identical to these, a fusion protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            a monoclonal or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention describes a fusion polypeptide comprising a von Willebrand factor A-like domain (wWF) amino acid sequence and an amino acid sequence heterologous to the wWF. Also described are: a method of preventing or ameliorating a symptom of anthrax in a subject thought to be at risk for exposure to or suspected of having been exposed to Bacillus anthracis; and a pharmaceutical composition comprising the novel fusion polypeptide. The composition and method are useful in preventing or ameliorating symptoms of cutaneous and/or inhalation anthrax. This is the amino acid sequence of a fusion protein comprising human TANGO197 extracellular region, minus the DG residues closest to the transmembrane region, and immunoglobulin G (IGG) fragment of crystallisation (FC) with mutations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 384
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New TANGO 197 and/or TANGO 216 fusion polypeptides for preventing or ameliorating symptoms of anthrax comprises a von Willebrand factor A-like domain (vWF) amino acid sequence and an amino acid sequence heterologous

(HUMA-) HUMAN GENOME SCI INC.

Ruben SM, Komatsoulis GA, Moore PA, Birse É Z.

2001-308778/32.

New nucleic acid molecules encoding 28 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions used as food additives or preservatives. and

Claim 11; Page 485-486; 562pp; English.

CC AAD05300-AAD05379 represent cDNAs corresponding to 28 human secreted protein genes, and AAE0144-AAE01513 represent the proteins they encode. CC AAB01514-AAE01544 represent human secreted protein fragments or variants. CC The genes and their secreted proteins are useful for preventing, treating cor ameliorating medical conditions, e.g., by protein or gene therapy. CC Pathological conditions can be diagnosed by determining the amount of the new genes. Specific uses are described for each of the 28 genes, the new genes. Specific uses are described for each of the 28 genes, concert tumours, footal and developmental abnormalities, and include cdeveloping products for the diagnosis or treatment of proliferative cdisorders, cancer, tumours, footal and developmental abnormalities, community of the consistency of the consistency. The diseases of the immune system, AIDS, autoimmune consistency disorders (e.g., Alzheimer's disease, Parkinson's disease), constitute disorders, schizophrenia, asthma, skin disorders (e.g., considerative disorders, schizophrenia, asthma, skin disorders, constituted disorders, and consistency related disorders, and consistency and infections. The proteins can also be used to aid wound healing and epithelial cell coroliferation, to prevent skin aging due to sunburn, to maintain organs consistency, and in chemotaxis, and can be used as a food additive or an entrart ive to modify storage properties and inthodicas anecific for a consistency tive to modify storage properties. preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The represents a human secreted protein of invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches 173;
The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum albumin, HAA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, digestive disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetes), haematopoietic disorders, neural disorders (e.g. Alzheimer's, parkinson's, Creutzfeldt-Jacob disease, encephalomyelitis, meningitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Albumin fusion protein; therapeutic protein X; human albumin; HA; human serum albumin; HSA; cancer; reproductive disorder; digestive disorder; immune disorder; endocrine disorder; haematopoietic disorder; neural disorder; connective disorder; cytostatic; antiintertility; antiintlammatory; antilicer; immunomodulator; anti-HIV; antidiabetic; haemostatic; nouropic; neuroprotective; antiparkinsonian; antimicrobial; neuroleptic;
                                                                                                                                                                                                                                                                                                                                                                                                                                   New fusion protein for treating disease e.g. diabetes comprises albumin fused to a therapeutic protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 12-APR-2000; 2000US-0229358P
